| Value           | 1  | Constant factor |

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>Bool</b>    | Boolean Integration                  |
| <b>Int8</b>    | 8 Bit Integer Implementation         |
| <b>Int16</b>   | 16 Bit Integer Implementation        |
| <b>Int32</b>   | 32 Bit Integer Implementation        |
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: Bool

---

Boolean Integration

| Outputs Data Type |      |
|-------------------|------|
| Out               | bool |

### Implementation: Int8

---

8 Bit Integer Implementation

| Outputs Data Type |      |
|-------------------|------|
| Out               | int8 |

### Implementation: Int16

---

16 Bit Integer Implementation

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: Int32

32 Bit Integer Implementation

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: FiP8

8 Bit Fixed Point Implementation

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

16 Bit Fixed Point Implementation

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

## Implementation: Float64

---

64 Bit Floating Point Implementation

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

| Mask Parameters |    |                                                                 |
|-----------------|----|-----------------------------------------------------------------|
| Name            | ID | Description                                                     |
| Tr              | 1  | Rising time in seconds. Slew rate will be $1/Tr$                |
| Tf              | 2  | Falling time in seconds. Slew rate will be $1/Tf$               |
| ts_fact         | 3  | Multiplication factor of base sampling time (in integer format) |

### Description:

Rising and falling time refer to a step from 0 to 1. Entries for *Tr*: *Rising time* and *Tf*: *Falling time* smaller than the actual sample time will be limited to the sample time internally.

The 16- and 32-Bit fixed point implementations are based on an internal 32-Bit wide slew-rate variable while the 8-Bit fixed point implementation uses a 16-Bit wide slew-rate variable.

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP16

---

## 6 Math

This library contains blocks for computation of common mathematical functions.

## Block: Abs

---

Calculation of absolute value of input.

| Inports |         |
|---------|---------|
| In      | Input u |

| Outports |                     |
|----------|---------------------|
| Out      | Absolute value of u |

### Description:

Calculation:

$$\text{Out} = |\text{In}|$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

---

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| In                | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

---

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

## Block: Acos

---

Arccosine computation of input value.

| Inports |         |
|---------|---------|
| In      | Input u |

| Outports |                  |
|----------|------------------|
| Out      | Result of sin(u) |

### Description:

Calculation:

$$\text{Out} = \arccos(\text{In})$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

---

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| In                | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

---

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

## Block: Add

---

Addition of input 1 and input 2.

| Inports |          |
|---------|----------|
| In1     | Addend 1 |
| In2     | Addend 2 |

| Outports |     |
|----------|-----|
| Out      | Sum |

### Description:

Calculation:

$$\text{Out} = \text{In}_1 + \text{In}_2$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

---

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| In1               | int8 |
| In2               | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

---

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In1               | int16 |
| In2               | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In1               | int32 |
| In2               | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In1               | float32 |
| In2               | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In1               | float64 |
| In2               | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

**Verification: Add FiP16 CPU TMS320F28335**

**Date of Test** 2026-06-19  
**Target controller** TMS320F28335

**Test case: Inport test****OK**

Inport test for Math block Add.

## Block: Asin

---

Arcsine computation of input value.

| Inports |         |
|---------|---------|
| In      | Input u |

| Outports |                  |
|----------|------------------|
| Out      | Result of sin(u) |

### Description:

Calculation:

$$\text{Out} = \arcsin(\text{In})$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

---

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| In                | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

---

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

## Block: Atan2

Computation of the angle between the inputs x and y.

| Inports |  |
|---------|--|
| y       |  |
| x       |  |

| Outports |                      |
|----------|----------------------|
| Out      | Result of atan2(y/x) |

### Description:

Calculation:

$$\text{Out} = \begin{cases} \arctan\left(\frac{y}{x}\right) & x > 0 \\ \arctan\left(\frac{y}{x}\right) + \pi & x < 0, y \geq 0 \\ \arctan\left(\frac{y}{x}\right) - \pi & x < 0, y < 0 \\ +\frac{\pi}{2} & x = 0, y > 0 \\ -\frac{\pi}{2} & x = 0, y < 0 \\ 0 & x = 0, y = 0 \end{cases}$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| y                 | int8 |
| x                 | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| y                 | int16 |
| x                 | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| y                 | int32 |
| x                 | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| y                 | float32 |
| x                 | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| y                 | float64 |
| x                 | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

## Block: Div

---

Division of input Num by input Den.

| Inports |                       |
|---------|-----------------------|
| Num     | Dividend (Numerator)  |
| Den     | Divisor (Denominator) |

| Outports |          |
|----------|----------|
| Out      | Quotient |

### Description:

Calculation:

$$\text{Out} = \begin{cases} 0 & \text{Num} = 0, \text{Den} = 0 \\ \max & \text{Num} > 0, \text{Den} = 0 \\ \min & \text{Num} < 0, \text{Den} = 0 \\ \frac{\text{Num}}{\text{Den}} & \text{otherwise} \end{cases}$$

**Note:** *maxVal* and *minVal* refer to the maximum/minimum representable value of the implementation.

### Implementations:

|                |                                      |
|----------------|--------------------------------------|

## Block: L2Norm

---

Calculation of L2-norm (euclidean norm).

| Inports |          |
|---------|----------|
| u1      | Input u1 |
| u2      | Input u2 |

| Outports |                             |
|----------|-----------------------------|
| Out      | Euclidean norm of u1 and u2 |

### Description:

Calculation:

$$\text{Out} = \|u\| = \sqrt{u_1^2 + u_2^2}$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

---

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| u1                | int8 |
| u2                | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

---

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| u1                | int16 |
| u2                | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| u1                | int32 |
| u2                | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| u1                | float32 |
| u2                | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| u1                | float64 |
| u2                | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

## Block: Negation

---

Negation of input signal.

| Inports |       |
|---------|-------|
| In      | Input |

| Outports |                     |
|----------|---------------------|
| Out      | Negated input value |

### Description:

Calculation:

$$\text{Out} = -\text{In}$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

---

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| In                | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

---

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

## Block: Sign

---

Signum function.

| Inports |         |
|---------|---------|
| In      | Input u |

| Outports |                                  |
|----------|----------------------------------|
| Out      | Value corresponding to sign of u |

### Description:

Calculation:

$$\text{Out} = \text{sgn}(\text{In}) = \begin{cases} 1 & \text{In} \geq 0 \\ -1 & \text{In} < 0 \end{cases}$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

---

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| In                | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

---

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| In                | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| In                | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

**Verification: Sign FiP16 CPU TMS320F28335**

## Block: Sub

---

Subtraction of input Minus from input Plus.

| Inports |            |
|---------|------------|
| Plus    | Minuend    |
| Minus   | Subtrahend |

| Outports |            |
|----------|------------|
| Out      | Difference |

### Description:

Calculation:

$$\text{Out} = \text{Plus} - \text{Minus}$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

---

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| Plus              | int8 |
| Minus             | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

---

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| Plus              | int16 |
| Minus             | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| Plus              | int32 |
| Minus             | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| Plus              | float32 |
| Minus             | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| Plus              | float64 |
| Minus             | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |

## Block: uSub

---

Subtraction of input Minus from input Plus with output wrapping.

| Inports |            |
|---------|------------|
| Plus    | Minuend    |
| Minus   | Subtrahend |

| Outports |            |
|----------|------------|
| Out      | Difference |

### Description:

Calculation:

$$\text{Out} = \text{Plus} - \text{Minus}$$

### Implementations:

|                |                                      |
|----------------|--------------------------------------|
| <b>FiP8</b>    | 8 Bit Fixed Point Implementation     |
| <b>FiP16</b>   | 16 Bit Fixed Point Implementation    |
| <b>FiP32</b>   | 32 Bit Fixed Point Implementation    |
| <b>Float32</b> | 32 Bit Floating Point Implementation |
| <b>Float64</b> | 64 Bit Floating Point Implementation |

### Implementation: FiP8

---

8 Bit Fixed Point Implementation

| Inports Data Type |      |
|-------------------|------|
| Plus              | int8 |
| Minus             | int8 |

| Outports Data Type |      |
|--------------------|------|
| Out                | int8 |

### Implementation: FiP16

---

16 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| Plus              | int16 |
| Minus             | int16 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int16 |

### Implementation: FiP32

32 Bit Fixed Point Implementation

| Inports Data Type |       |
|-------------------|-------|
| Plus              | int32 |
| Minus             | int32 |

| Outports Data Type |       |
|--------------------|-------|
| Out                | int32 |

### Implementation: Float32

32 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| Plus              | float32 |
| Minus             | float32 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float32 |

### Implementation: Float64

64 Bit Floating Point Implementation

| Inports Data Type |         |
|-------------------|---------|
| Plus              | float64 |
| Minus             | float64 |

| Outports Data Type |         |
|--------------------|---------|
| Out                | float64 |
